SUMMARY

Motivated and results-driven Software Engineer with a strong foundation in software design, development, and deployment across various platforms. Experienced in delivering innovative solutions and improving system performance through efficient coding and problem-solving techniques. Proficient in .NET and Angular, with a proven ability to build and maintain robust web applications. Seeking to contribute technical skills and a passion for technology to a dynamic team, driving the development of cutting-edge software applications.

EXPERIENCE

*Banque Misr, **Software Engineer***

Apr 2024 - Present

- Building enterprise-scale applications using .NET Core, Angular, and SQL Server.
- Building applications with microservice architecture and implementing clean architecture and CQRS pattern with RabbitMQ message broker for asynchronous communication and gRPC for synchronous communication.
- Leveraging process orchestration platforms like Camunda.
- Implementing CI/CD pipelines using Azure DevOps for automated build, test, and deployment.
- Adopting and working within Agile methodologies.
- Collaborating with cross-functional teams to deliver high-quality software solutions.
- Using Redis for distributed caching to enhance system performance and scalability.
- Responsible for deploying and managing applications on IIS Server.

*Xerox, **Software Engineer***

Jun 2023 - Apr 2024

- Developed and maintained internal applications to support business operations, ensuring high performance, reliability, and scalability.
- Troubleshoot and resolved software defects by analyzing logs, debugging code, and collaborating with cross-functional teams.
- Participated in designing and implementing new features, enhancements, and workflow improvements based on user and business requirements.
- Assisted in deploying applications, performing system testing, and ensuring smooth integration with existing platforms.
- Provided technical guidance and support to teams and end-users to ensure effective use of developed solutions.

*Information Technology Institute (ITI), **.Net Full Stack Developer***

Jan 2023 - May 2023

- Collaborate with cross-functional teams to gather and analyze requirements for web-based projects.
- Develop scalable and efficient front-end and back-end solutions using cutting-edge technologies.
- Work on the integration of web applications with databases and third-party services.
- building full stack application using .net core and angular needed.

*Sprints, **Software Developer***

Jul 2022 - Dec 2022

- Designed and implemented modular web application components, focusing on clean architecture and maintainable code.
- Built interactive user interfaces and reusable UI components to enhance user experience and frontend performance.
- Developed RESTful APIs and implemented business logic to support application workflows and data processing.
- Optimized application performance by improving database queries, reducing API response time, and enhancing code efficiency.
- Participated in agile development sprints, contributing to task planning, code reviews, and collaborative problem-solving.

EDUCATION

Port Said University

BSc in Engineering

graduation project: " New Hybrid Organic Waste Distillation Membrane System for Simultaneous Production of Biofuels and Water" Grade: Excellent.

SKILLS

Java • C# • JavaScript • Ruby • Typescript • SQL • HTML • .Net core • Spring Boot • ExpressJS

HONORS & AWARDS

The graduation project has been awarded by the Egyptian academic of science and research and technology
